DIMITAR PRODROMOV

To the Hiring Team at Patrianna LTD,

I am writing to enthusiastically apply for the **Middle Automation Engineer** position. When I saw that Patrianna is looking for someone with experience in **Social Gaming**, **Java Automation**, and **Playwright**, I felt like the job description was written specifically for me.

Coming from a background at **DraftKings**, I have already lived through the challenges of testing high-load betting platforms where accuracy is paramount and downtime is not an option. I don't just know "how to automate"; I know *what* to automate in a gaming environment to bring maximum value.

Here is how my technical arsenal aligns directly with your stack:

- **Java & Playwright:** I have extensive expertise in building hybrid automation frameworks using Java Core. I switched from Selenium to **Playwright** early on for its speed and reliability in handling dynamic UI elements typical in modern betting apps.
- **Mobile & API:** I have hands-on experience with **Appium** for automating mobile flows (bet slips, wallet deposits) and profound knowledge of **RestAssured** for backend API validation. I understand that the backend is the heart of the system and test it rigorously.
- **SDET Mindset:** In my recent R&D work ("QAntum Vortex"), I architected complex test harnesses for simulating WebSocket traffic and verifying system resilience under chaos conditions. I am comfortable configuring **CI/CD pipelines** and maintaining test environments.

I fit the "Middle" profile perfectly: I am independent enough to take a task from estimation to delivery without hand-holding, yet eager to learn and grow within a strong team. I understand Test Theory, I write clean, maintainable code, and I view QA not as a "gatekeeper" but as an efficiency enabler for the entire dev team.

I am ready to bring my domain expertise and technical skills to Patrianna and contribute to your mission of captivating the North American market. Thank you for your time and consideration.

Sincerely,

Dimitar Prodromov
